Purpose:

The delay line kit enables precise variation of the optical path length. This is a quadruple pass delay line kit for the UV wavelengths.

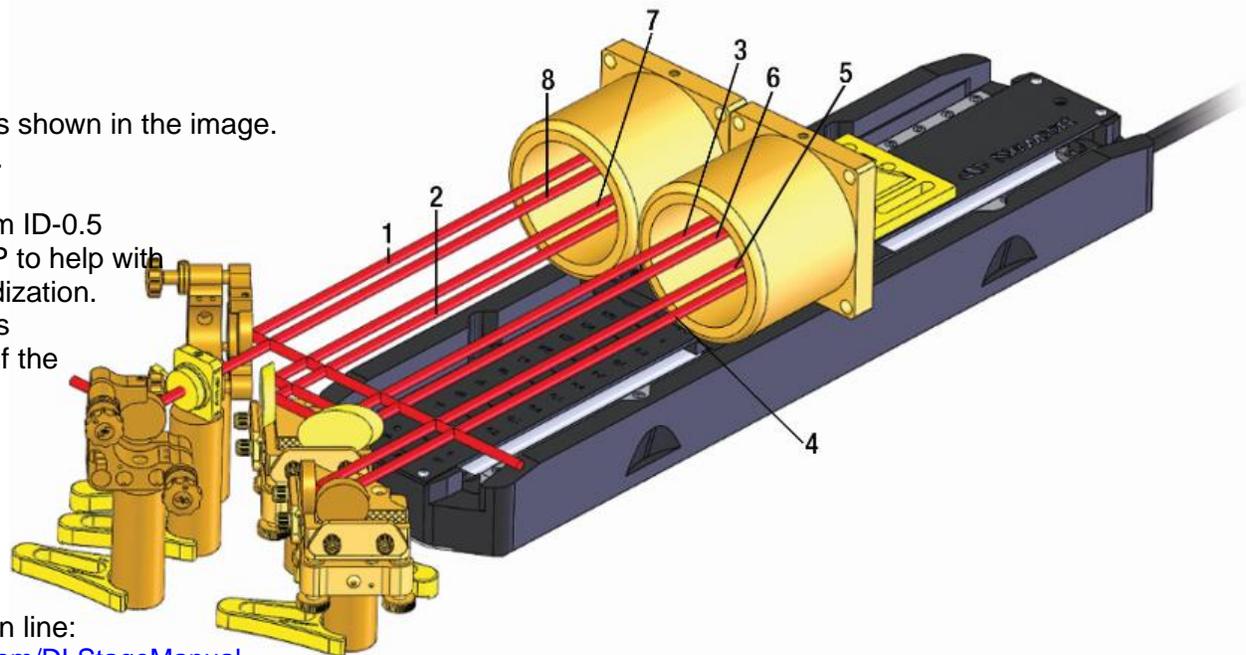

Instructions:

Assemble products as shown in the image. Beam path is labeled.

Use the iris diaphragm ID-0.5 installed in the MH-2P to help with beam height standardization. Optional additional iris diaphragms will help if the alignment is too challenging.

Please refer to detailed instructions in "DL Stage User's Manual", which can be found on line:
